When was the last time you saw cursive letters on your computer screen, cell phone or tablet? No wonder students lose interest in cursive writing. By middle school or high school, most students print exclusively or make up their own cursive style.

That cursive handwriting will no longer be taught in the elementary schools of several states has recently made many headlines. In reaction, we say, “Hooray! It’s about time.” Even as teachers and champions of cursive handwriting, we applaud this change. In this technological age, traditional cursive handwriting is outdated. There are other options.

When most people hear the word “cursive,” they think only of “looped cursive.” This brings to mind tedious exercises in grade school, inky fingers and low grades in penmanship. After all of this struggle to learn looped cursive, it is rarely used; all modern forms plead, “Please Print.”

“Cursive” comes from the Latin word “currere,” which means “to run.” Cursive writing is literally a “running hand,” but cursive doesn’t mean that every letter in a word has to be joined to the next letter, that the writing must be sloped or that loops should be added to letters. Cursive just means that handwriting has a flow to it that makes it a comfortable and efficient method of writing.

There are actually two kinds of cursive handwriting – looped cursive and cursive italic.

Looped cursive has been taught in U.S. schools since the early 1900s and is also known as The Palmer Method, Bowmar/Noble, Zaner-Bloser or D’Nealian, among other names. In looped cursive, loops are added to lowercase and capital letters. Loop cursive requires that all letters in a word be connected. When third grade students make the transition from printing to cursive writing, they must learn 26 new lowercase and capital letter shapes. This is a time-consuming and often traumatic transition. In all other areas of education, learning is more closely linked to previously learned concepts.

Cursive italic comes to us from the height of the Italian Renaissance. Cursive italic is a joined form of printing that doesn’t require students to learn new letter shapes. Also, the letter slope is the same for both basic italic (printing) and cursive italic. Since the writer is not adding loops to letters, handwriting remains legible. The writer may choose to join letters, lift between letters or use a combination of both techniques. Printed handwriting
is always an acceptable choice, and attorneys attest that a clear, printed signature is just as legal as an illegible, joined scrawl.

In our long experience, we have found that italic handwriting works well for all levels from kindergarten to adulthood. Basic italic instruction begins in kindergarten, and cursive italic is introduced in second grade. Teachers need less instruction time since cursive italic is a natural continuation of what students have already been taught. Some children continue to print, while others easily segue into using diagonal and horizontal lines to connect some letters.

Adults in our seminars for medical professionals who have chosen to make their handwriting legible often find it helpful to drop the loops, performing a “loopectomy” as one surgeon phrased it. That’s why we see “Please Print” on every form: eliminating loops promotes legibility. Adults who use basic and cursive italic find that they have a legible and aesthetically pleasing handwriting.

Considering your life experience, which of the two cursive, looped cursive or cursive italic, would you choose to learn again? Think about process: Is the time spent teaching handwriting efficient, and does it build on previously learned concepts? Think about outcomes: Is the resulting handwriting legible, and is it an effective means of personal communication?

So we applaud the decision of some states to stop teaching looped cursive. This opens up the possibility of teaching the more legible and easily learned cursive italic. In this technological age, legible handwriting is still important. We encourage states and local school districts to adopt a more practical and handsome handwriting: basic and cursive italic.
